Web3 Blogging To Earn

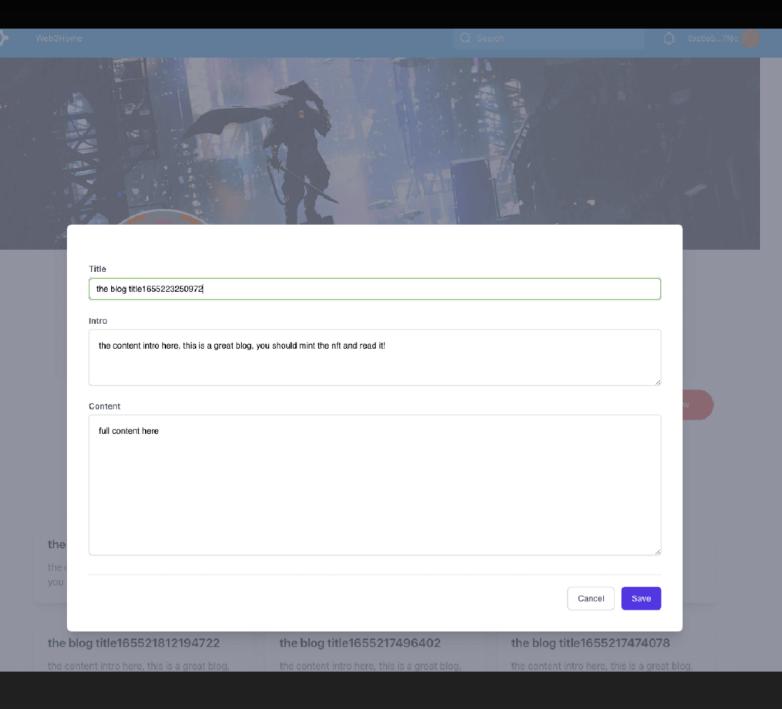

with token gating that provide payment logic

HOW

"Companies, creators, and DAOs use Lit Protocol to grant access to content, software, and data using tokens, NFTs, and blockchain identity as keys."

Features

- Blog: user creation for sale
- list/create blog posts, save in IPFS
- With LIT to have content permission control (user must mint poster's NFT to have access to the article)
- blog content can add token gating logic (only user have special NFT can read the blog content)
- Social relations: CyberConnect
- Follow/unfollow actions
- Followers list
- Followings list
- Web3 LinkTree
- User can add many social platform link to their W3NS home page
- Data store on IPFS
- Data permission control by LIT
- Search any address to show the Web3 things
